OVERVIEW

FOTONICA 2016 is the 18th Italian National Conference on Photonic Technologies.

The Conference is the meeting place of the Italian Photonic Community where the most advanced achievements of research in photonics are presented and discussed.

The Conference covers all aspects of photonics, with a particular emphasis on applications in several fields, including telecom, sensors, energy saving, lighting and health.

FOTONICA 2016 is structured in three days of technical sessions that include review-papers and original contributions (oral and poster presentations) relevant to the general Conference themes.

There are plenary sessions, panels and symposia on the state of the art and the future expectations in the field of photonics, including the national and international initiatives under development.

FOTONICA 2016 is aimed at an audience of professionals active in photonics, including researchers, manufacturers and users of technology, as well as analysts and investors interested in this sector.

Photonics as the Key Technology Transforming Our Cities in a Living Lab

In the context of new urban challenges and growing request of services, our cities need to find innovative solutions to respond in real time to the uses and needs of the citizens. Photonics can be the real catalyst for the sustainable attainment of a smart connected city thanks to a pervasive optical monitoring and to a fiber-based ICT infrastructure. In the symposium the two examples regarding the cities of Bristol and L'Aquila will be presented, describing the research activities of the projects "BRISTOL IS OPEN" and "INCIPICT", respectively. Moreover, the role of photonic technologies in the development of future smart cities and IoT will be discussed, from the sensors for the cognitive inputs to the convergent interconnection networks.

Introduction: Pierpaolo Boffi - *Politecnico di Milano*
